Research Interests

I am an analytic number theorist interested in automorphic forms, automorphic representations and L -functions related to those objects. I am also very interested in representation theory and spectral theory in this context. In my thesis I studied exponential sums weighted by the Fourier coefficients of cusp forms. In particular, I worked with higher rank automorphic forms, more specifically Maass forms for the general linear group $GL(n, \mathbb{R})$. In addition, I am also interested in arithmetic and Galois representations, especially in the classical Langlands program.
