Research Interests

I am an analytic number theorist interested in automorphic forms, automorphic representations and L -functions related to those objects. I am also very interested in group actions, representation theory and spectral theory in number theoretic contexts. In my doctoral thesis I studied exponential sums weighted by the Fourier coefficients of cusp

forms. In particular, I worked with higher rank automorphic forms, more specifically Maass cusp forms for the general linear group $GL(n, \mathbb{R})$.
